

225.1. General

The Collegiate Program was established to increase the flying safety and interest level of collegiate pilots in aerobatics, aerobatic competition, and the IAC.

225.2. Purpose

The program is intended to be a springboard for competitors to continue their pursuit of competition aerobatics upon leaving the collegiate environment. Two awards exist which serve to recognize skill and proficiency for the collegiate aerobatic competitor:

225.2.1. The Collegiate National Championship Team Award

225.2.2. The Individual Collegiate National Champion Award

225.3. Program Administration

225.3.1. The Executive Director works closely with the committee to implement administrative procedures to manage the program. Program oversight and administration is provided by the Collegiate Program Committee. This committee consists of a Chair and a minimum of two additional committee members to be selected and serve at the discretion of the Chair.

225.3.2. Rules for the Collegiate Program can be found on the IAC website.

225.4. Program Guidelines

The program is intended to encourage interest in aerobatics through collegiate competition. Safety is always first and foremost a priority. Second, is the inclusion of as many college student competitors as possible. It is the intent of this program to sharpen pilot skills in the categories where they can be the most rewarded in terms of pilot ability and collegiate recognition. Rules are intended to encourage as many students as possible to participate and for those students to safely fly in as many competitions as their schedules permit while recognizing the aerobatic achievements of the competitors.

225.5. Eligibility

Students are eligible for contests flown in the season before beginning college and the season following graduation within that calendar year.
